C: Remarks:

The present amendment is filed in accordance with the examiner's suggestions which are appreciated and to place this application in condition for allowance. The Examiner was exactly right in his understanding stated with respect to claim 1 in paragraph 19 on page 6 of the action and the claim is amended to reflect that observation. Also, in the dependent claims, the supervisor software creates a coherency region ID for each process of the multiprocessor system of a plurality of processor nodes, and each process has its own coherency region, and one or more coherency mode bits for each processor node as the Examiner has understood. The language hopefully now makes this clear.

Accompanying the prior Amendment was a Terminal Disclaimer for this application disclaiming any term after the expiration of the related patent application USSN 10/603,251 when it issues as a patent.

A notice of allowance is respectfully requested.

RESPECTFULLY SUBMITTED
(For the inventors)
